	SN ON GND											T																				

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days, also seasonal precipitation, for the preceding 12 months are carried in the June issues of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table, became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Long-term means for full-time stations (those with Weather Bureau, Weather Bureau Airport, or Weather Bureau City in the station name, and also Beaumont 1 E and San Jose) are based on the period 1921 - 1950, adjusted to represent observations taken at the present location. Long-term means for all stations except full-time Weather Bureau stations are based on the period 1931 - 1955.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the "Seasonal Snowfall" Table include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in the "Monthly Extremes"; "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. (During the summer months some observers take the observations on daylight saving time.)

Snow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and FAA stations. For these stations snow on ground values are at 4:00 a.m. PST, except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB which are taken at 6:00 a.m. PST, and Mt. Shasta WB City at 8:00 a.m. PST.

In the Station Index the letters C, G, H, J, and S in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.

G "Soil Temperature" Table.

H "Snowfall and Snow on Ground" Table.

J "Supplemental Data" Table.

S Storage Precipitation Station. Precipitation measurements, made at irregular intervals, will be published later in "Storage-Gage Precipitation Data" Bulletin.

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.

Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.

\- No record in the "Supplemental Data" Table; "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; "Daily Soil Temperature" Table; and the Station Index.

\+ And also on an earlier date or dates.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

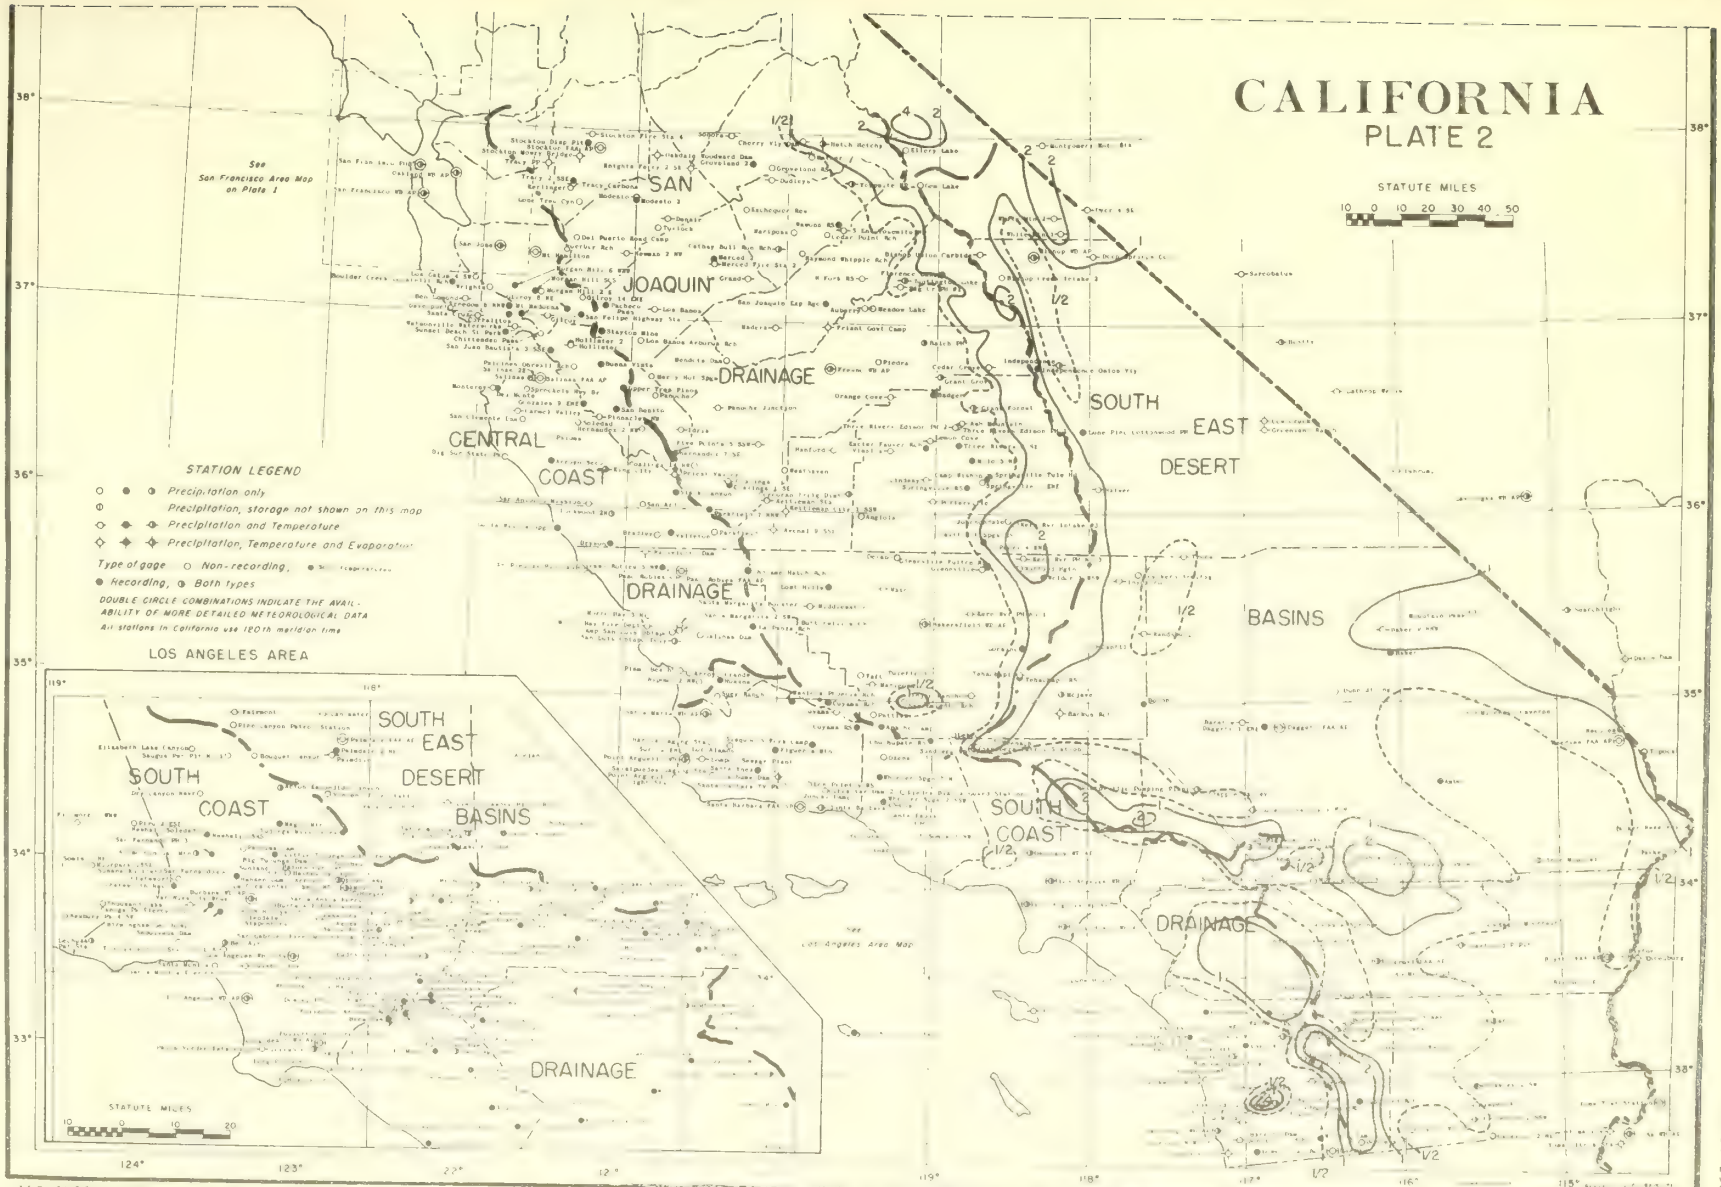
M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.



VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

General weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA - NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication SUBSTATION HISTORY for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C. for $1.25. Similar information for regular Weather Bureau stations may be found in the latest annual issues of Local Climatological Data, obtained as indicated above, price 15 cents.

SEPTEMBER 1961
Volume 65 No. 9

CLEMSON COLLEGE LIBRARY
NOV 8 - 1961
AGRI. REF. DEPT.

ASHEVILLE: 1961

Temperature: For the month of September temperatures averaged near normal along the central coast but well below normal elsewhere. The greatest departures were in the southeast desert basins, where readings averaged 4° below normal. At Red Bluff the maximum for the month was only 96°, the lowest monthly maximum for September in 22 years. Sacramento experienced the first September in 15 years without a maximum reading in excess of 95°. On the other hand, there have been 68 days at Sacramento this summer with maxima of 90° or higher -- a figure that has been exceeded in only 11 years since records were started in 1877. Burbank reported the coolest September since 1950. New high temperature records were established at San Diego on the 4th and 5th.

Precipitation: In the area north of the Tehachapi Mountains precipitation for the month was well above normal. To the southward, however, it was deficient. Some problem was created in parts of northern California by substantial rains that fell on the 16th and 17th. Annual range grasses were sprouted by the moisture, but dry winds later in the month resulted in the loss of most plants. There is a possibility of a li[f]t stand of grass during the coming season as a [re]sult of this loss.

The sunshine at Eureka, 73 percent of possib[le] was substantially greater than usual. This f[ig]ure has been exceeded only twice in Septem[ber] since 1896. Sacramento reported a 1-minute w[ind] speed of 37 m.p.h. on the 2d, the fastest w[ind] ever recorded there in September.

Storms: The high winds of the 2d and 3d w[ere] general over the northern part of the Sta[te]. Crops were damaged in some areas, and utili[ty] lines were blown down. Several plate glass st[ore] windows were reported broken by the wind, [and] sign boards were destroyed. A parked aircr[aft] was torn loose and badly damaged, and several [in]complete construction projects sustained ma[jor] damage.

50 Fulton Street
San Francisco 2, California

MONTHLY EXTREMES

Highest Temperature 110° on the 2d+ at Death Valley.

Lowest Temperature 16° on the 24th at Bridgeport and on the 30th at Fort Jones Ranger Station

Greatest Total Precipitation 2.82 inches at Twin Lakes.

Least Total Precipitation 0.00 at 145 stations.

Greatest One-day Precipitation 1.72 inches on the 16th at Salt Springs Power House.

Greatest Total Snowfall 4.5 inches at Mt. Shasta Ski Bowl.

Deepest Snow on Ground 3 inches on the 17th at Mt. Shasta Ski Bowl.

PREPARATION AND PUBLICATION OF THIS BULLETIN

Much of the data presented in this publication comes from observations taken by volunteer cooperative observers. These observations are mailed after the close of the month to a Weather Records Processing Center, where they are checked for accuracy and completeness and placed on punch cards. These cards are used to prepare copy for the various tables. Printing and mailing is done at the National Weather Records Center at Asheville, North Carolina.

The various steps all take time. Records for any state cannot be checked by machine until nearly all of them for that state have been received. Printing cannot be done until all the tables and the text for an issue are completed and assembled.

Constant effort is made to speed up publication and still maintain high quality of the data. A realistic deadline for mailing the printed Climatological Data has been set as the 15th of the second following month (45 days after the end of the month for which data are published). If any recipient's copy is unduly delayed, the Director, National Weather Records Center, Asheville, North Carolina should be advised.

ditional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Of-ce Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

gures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

layed data and corrections will be carried only in the June and December issues of this bulletin.

nthly and seasonal snowfall and heating degree days, also seasonal precipitation, for the preceding 12 months are carried in the June issues this bulletin.

ations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this sue.

visions, as used in "Climatological Data" Table, became effective with data for January 1941.

less otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches and wind vement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

aporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation d Wind" Table.

ng-term means for full-time stations (those with Weather Bureau, Weather Bureau Airport, or Weather Bureau City in the station name, and also aumont 1 E and San Jose) are based on the period 1921 - 1950, adjusted to represent observations taken at the present location. Long-term ans for all stations except full-time Weather Bureau stations are based on the period 1931 - 1955.

ter equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. mples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other uses of local variability in the snowpack may result in apparent inconsistencies in the record.

tries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the "Seasonal Snowfall" Table in-ude snow and sleet. Entries of snow on ground include snow, sleet, and ice.

ta in the "Monthly Extremes"; "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the nowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation mes in local standard time. (During the summer months some observers take the observations on daylight saving time.)

ow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and FAA stations. For these sta-ons snow on ground values are at 4:00 a.m. PST, except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB which are taken at 6:00 a.m. PST, d Mt. Shasta WB City at 8:00 a.m. PST.

In the Station Index the letters C, G, H, J, and S in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.

G "Soil Temperature" Table.

H "Snowfall and Snow on Ground" Table.

J "Supplemental Data" Table.

S Storage Precipitation Station. Precipitation measurements, made at irregular intervals, will be published later in "Storage-Gage Precipitation Data" Bulletin.

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.

Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.

\- No record in the "Supplemental Data" Table; "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; "Daily Soil Temperature" Table; and the Station Index.

\+ And also on an earlier date or dates.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

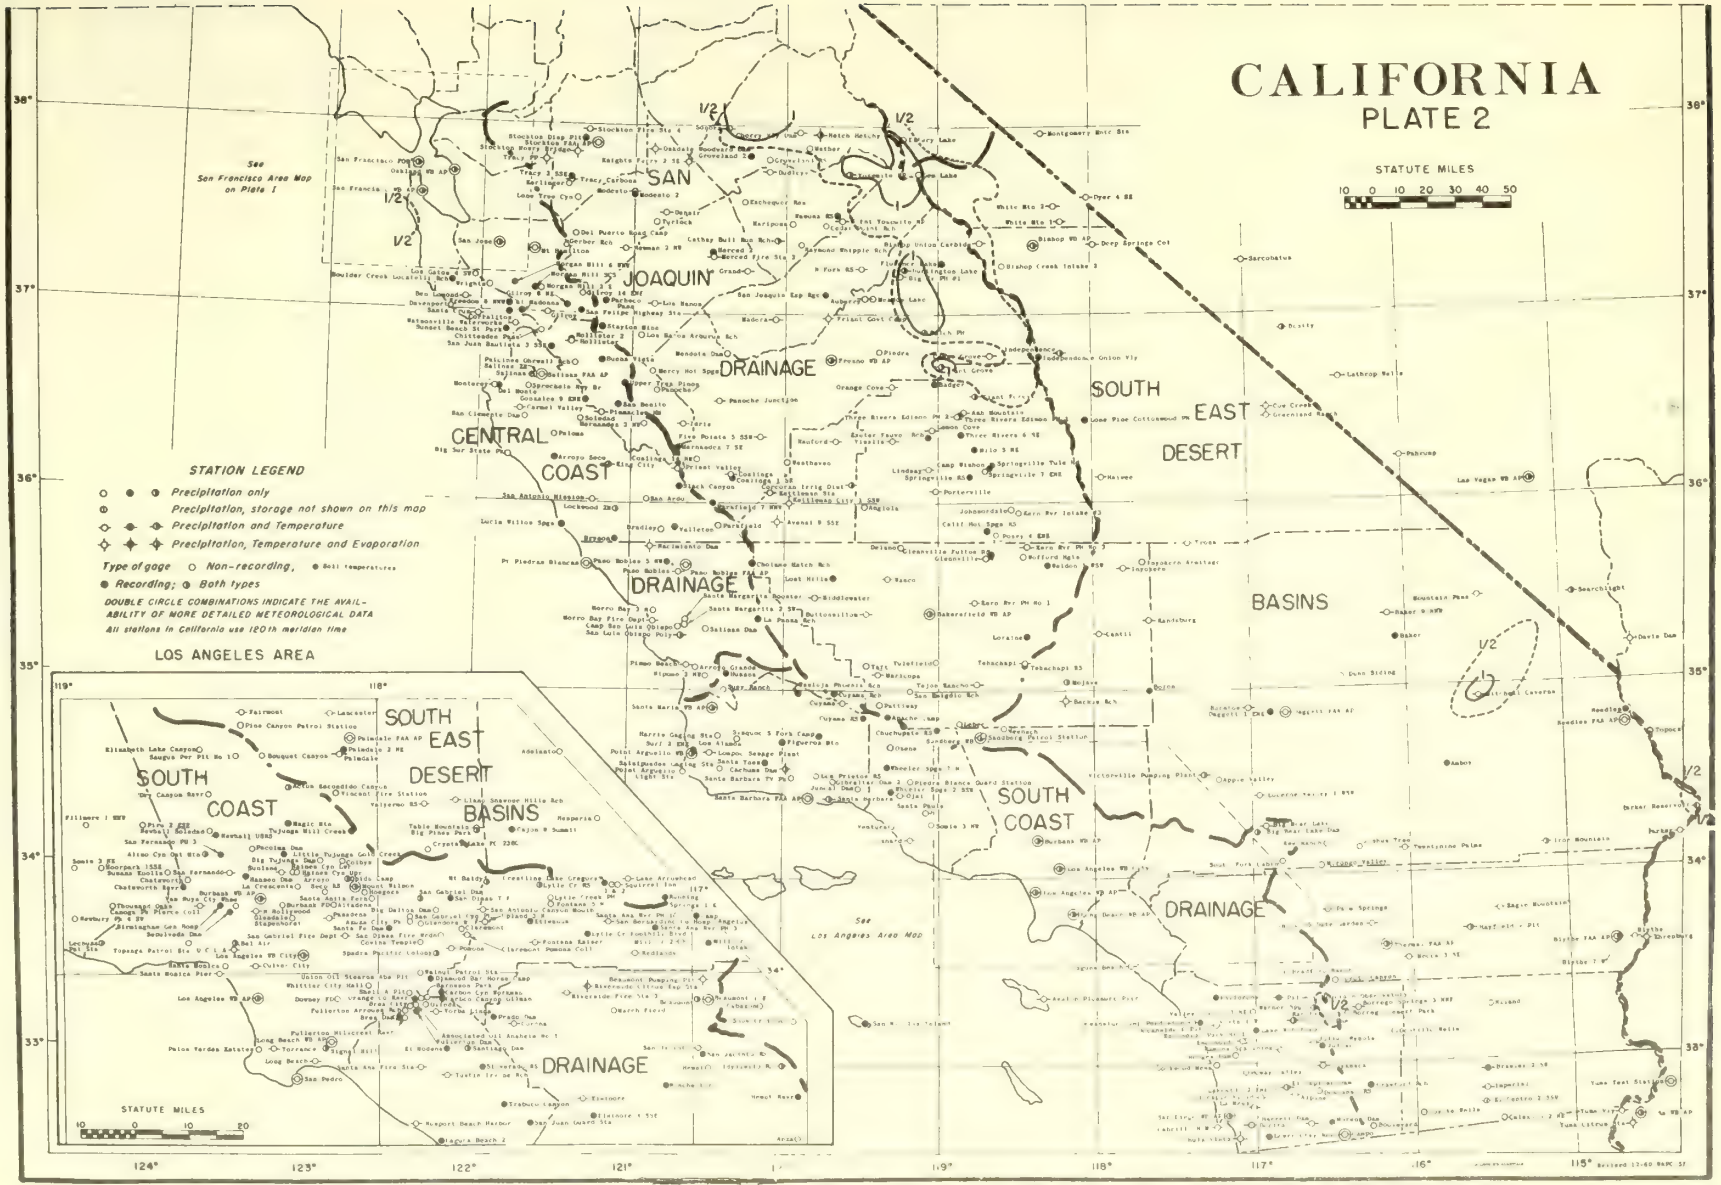
M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.



VAR This entry in time of observation column in Station Index means variable.

bscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and ney orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

neral weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA - TIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington , D. C.

formation concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publi-tion SUBSTATION HISTORY for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, shington 25, D.C. for $1.25. Similar information for regular Weather Bureau stations may be found in the latest annual issues of Local Clima-logical Data, obtained as indicated above, price 15 cents.

CLIMATOLOGICAL DATA

CALIFORNIA

OCTOBER 1961
Volume 65 No. 10

ASHEVILLE: 1961

Temperature: Temperatures averaged above normal over most of the State during October, with some exceptions at high elevation stations and along the North Coast. The Southeast District Region averaged 2° below normal. Record maximum temperatures and new record high temperatures for so late in the season were established on the 14th and 15th in the southern two-thirds of the State. On October 14, San Diego recorded 107° and Los Angeles 106° for record maximum temperatures and the second highest temperature ever recorded. Burbank with 101° on the 15th set a new record and the maximum temperature for the year. A new maximum of 94° at San Francisco on the 15th was the second highest temperature for October since records began. Sacramento had five consecutive days, 14th through 19th, of record temperatures.

Precipitation: Precipitation was deficient in all parts of the State with much of California receiving little or no precipitation. The general average for all but the North Coast and Cascade-Sierra Region was about fifteen percent of the normal. Here measurements indicated forty-five percent to near to the expected normal rainfall.

Storms: Over the entire State on the 7th and 8th, strong winds blew down trees, disrupted utilities, broke windows, wrecked awnings, and spread grass and brush fires. Several boats were sunk and at least two men were presumed drowned. Several water spouts formed off the southern coast on the 8th with one moving inland causing minor damage and injuring several persons. The water spout was accompanied by rain, hail, and lightning. A windstorm on the 28th - 29th in central and southern California disrupted utilities, blew down trees, and caused minor property damage. Several boats were sunk. Blowing dust and sand delayed traffic for several hours on major highways in some southern sections of the State.

Max R. McDonough
Acting Weather Bureau State Climatologist
557 Federal Office Building
50 Fulton Street
San Francisco, California

MONTHLY EXTREMES

Highest Temperature 111° on the 15th at Long Beach Weather Bureau Airport.

Lowest Temperature -20° on the 29th at White Mountain 2.

Greatest Total Precipitation 9.95 inches at Orick 10 SE.

Least Total Precipitation 0.00 at 133 stations.

Greatest One-day Precipitation 4.12 inches on the 27th at Elk Valley.

Greatest Total Snowfall 30.0 inches at Mt. Shasta Ski Bowl.

Deepest Snow on Ground 17 inches on the 31st at White Mountain 2.

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days, also seasonal precipitation, for the preceding 12 months are carried in the June issues of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table, became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Long-term means for full-time stations (those with Weather Bureau, Weather Bureau Airport, or Weather Bureau City in the station name, and also Beaumont 1 E and San Jose) are based on the period 1921 - 1950, adjusted to represent observations taken at the present location. Long-term means for all stations except full-time Weather Bureau stations are based on the period 1931 - 1955.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the "Seasonal Snowfall" Table include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in the "Monthly Extremes"; "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. (During the summer months some observers take the observations on daylight saving time.)

Snow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and FAA stations. For these stations snow on ground values are at 4:00 a.m. PST, except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB which are taken at 6:00 a.m. PST, and Mt. Shasta WB City at 8:00 a.m. PST.

In the Station Index the letters C, G, H, J, and S in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.

G "Soil Temperature" Table.

H "Snowfall and Snow on Ground" Table.

J "Supplemental Data" Table.

S Storage Precipitation Station. Precipitation measurements, made at irregular intervals, will be published later in "Storage-Gage Precipitation Data" Bulletin.

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.

Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.

\- No record in the "Supplemental Data" Table; "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; "Daily Soil Temperature" Table; and the Station Index.

\+ And also on an earlier date or dates.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

General weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA - NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication SUBSTATION HISTORY for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C. for $1.25. Similar information for regular Weather Bureau stations may be found in the latest annual issues of Local Climatological Data, obtained as indicated above, price 15 cents.

CLIMATOLOGICAL DATA

CALIFORNIA

CLEMSON COLLEGE LIBRARY
JAN 24 1962
AGRI. DEPT.

NOVEMBER 1961
Volume 65 No. 11

ASHEVILLE: 1962

Temperature: Readings for the month averaged below normal in all divisions of the State with the greatest departures reported from the area south of the Tehachapis. Fresno reported a minimum reading of 27° on the 18th, to equal the lowest November minimum of record.

Precipitation: Rainfall for the month averaged above normal in all divisions but th the Northeast Interior. Except for the North Coast and Central Coast, however, departure were small. Accumulations since July 1 have been greater than normal in the North Coast Central Coast, and Northeast Interior divisions, but are still below normal over the res of the State. In the Mt. Shasta area a heavy, wet snowfall on the 24th and 25th damage shrubs and trees. November snowfall in that area was the heaviest since records were begu in 1890. New records were also set for the greatest 24-hour snowfall and the greatest dept on the ground. During the last few days of the month there was good snowfall in the hig Sierras. The Smith River rose slightly above flood stage briefly on the 23d.

Storms: Strong winds in southern California on the 5th and 6th downed trees and utilit lines, produced a number of marine mishaps, and blew from 10 to 50 percent of the avocad crop from trees. Dust whipped up by the wind caused a 16-car pileup, injuring 23 persons The wind brought the lowest relative humidity of record to Burbank, 3 percent, and contrib uted to the disastrous fires in the hills of the Los Angeles area. A repeat performanc on the 12th and 13th caused additional damage. A parked plane was wrecked; an employe clearing sand from a railroad track was killed when struck by a train; and some highwa were temporarily closed by drifting sand.

The first heavy rain of the season resulted in severe damage to many homes and roadwa in the Los Angeles area. Areas recently denuded by fire suffered major erosion; inundati roads, cars, and homes in mud, ashes, and rocks. Damage to structures along the coastli and to marine equipment in the Santa Barbara area resulted from wind on the 25th. Oil dril ing rigs offshore were damaged, and one capsized and sank, but crewmen were rescued.

See reference notes following Station Index.

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days, also seasonal precipitation, for the preceding 12 months are carried in the June issues of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table, became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Long-term means for full-time stations (those with Weather Bureau, Weather Bureau Airport, or Weather Bureau City in the station name, and also Beaumont 1 E and San Jose) are based on the period 1921 - 1950, adjusted to represent observations taken at the present location. Long-term means for all stations except full-time Weather Bureau stations are based on the period 1931 - 1955.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the "Seasonal Snowfall" Table include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in the "Monthly Extremes"; "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. (During the summer months some observers take the observations on daylight saving time.)

Snow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and FAA stations. For these stations snow on ground values are at 4:00 a.m. PST, except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB which are taken at 6:00 a.m. PST, and Mt. Shasta WB City at 8:00 a.m. PST.

In the Station Index the letters C, G, H, J, and S in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.

G "Soil Temperature" Table.

H "Snowfall and Snow on Ground" Table.

J "Supplemental Data" Table.

S Storage Precipitation Station. Precipitation measurements, made at irregular intervals, will be published later in "Storage-Gage Precipitation Data" Bulletin.

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.

Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.

- No record in the "Supplemental Data" Table; "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; "Daily Soil Temperature" Table; and the Station Index.

+ And also on an earlier date or dates.

* Amount included in following measurement, time distribution unknown.

Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

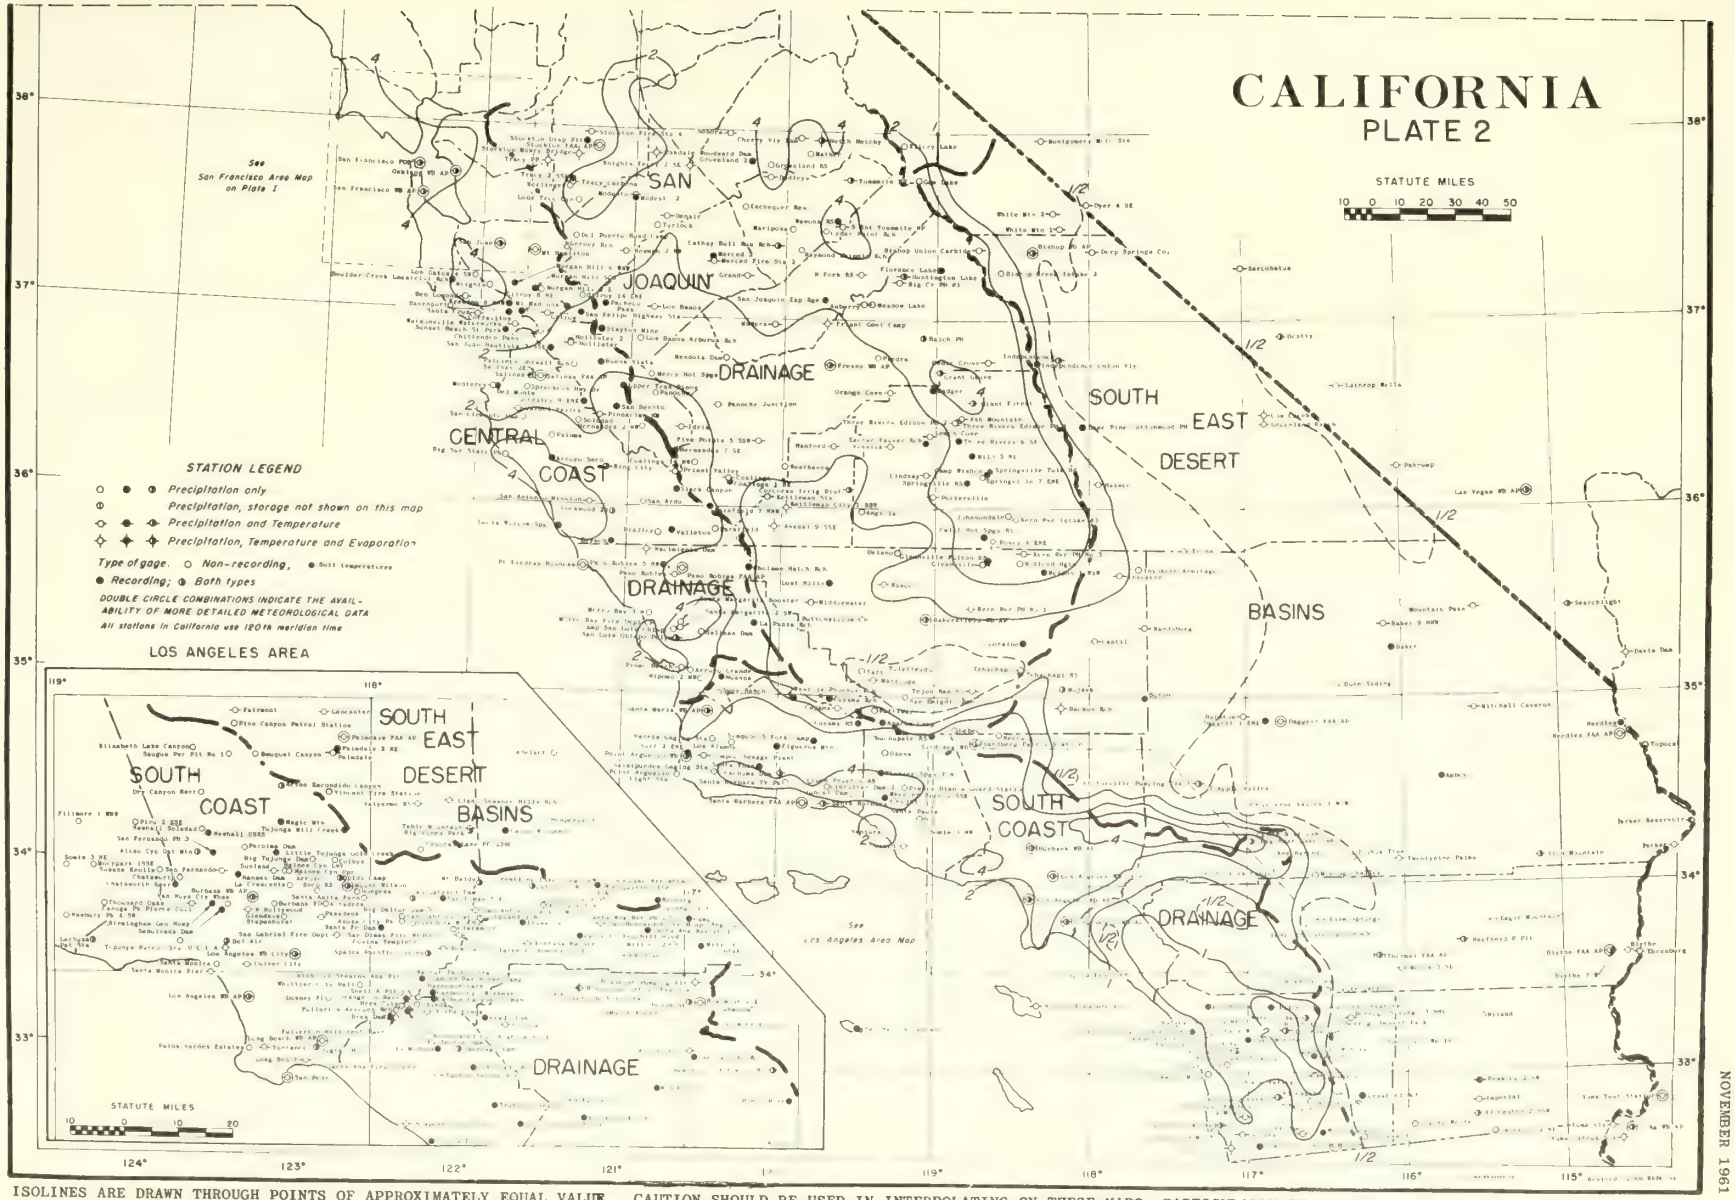
M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.



VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

General weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA - NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication SUBSTATION HISTORY for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C. for $1.25. Similar information for regular Weather Bureau stations may be found in the latest annual issues of Local Climatological Data, obtained as indicated above, price 15 cents.

CLIMATOLOGICAL DATA

CALIFORNIA

DECEMBER 1961
Volume 65 No. 12

ASHEVILLE: 1962

Precipitation: Precipitation was limited, for the most part, to the first 20 days of the month; fair weather marked the last decade. Monthly totals were below normal in almost all areas of the State, and cumulative totals from July 1 through December 31 were well below normal. The North Coast, Sacramento Valley, and San Joaquin divisions had less precipitation during the six-month period than they had in the same period last year. Elsewhere totals were a little ahead of last year. On the 20th at Red Bluff a shower brought 0.44 inch in 5 minutes and 0.62 inch in 10 minutes, a rate of fall that has been exceeded there only once in the period of record.

Temperature: Temperatures, too, were below normal in all divisions for the second consecutive month. Some areas have now had temperatures averaging below normal for as long as five months. A minimum reading of 8° on the 11th at Mt. Shasta was the coldest December temperature since 1948. Sacramento reported a maximum of 42° on the 13th, the lowest of record for that date, and then went on to observe a minimum of 53° on the 20th, the highest of record for that date. The interior valley reported more cloudiness and fog and less sunshine than usual for December.

Storms: The only major damage reported was on the 1st when heavy rain threatened to overflow an earthfill dam under construction near Finley, threatening the valley downstream. About 500 persons were evacuated from their homes for approximately 24 hours until cessation of the rain and construction of a temporary spillway relieved the flood threat. Minor flooding and damage to roads and utility lines were observed from a number of points during the early part of the month, but no serious losses were reported.

C. Robert Elford
Weather Bureau State Climatologist
557 Federal Office Building
50 Fulton Street
San Francisco 2, California

MONTHLY EXTREMES

Highest Temperature 85° on the 24th at Indio US Date Garden.

Lowest Temperature -13° on the 9th at Bridgeport.

Greatest Total Precipitation 10.77 inches at Pit River Power House 5.

Least Total Precipitation 0.16 inch at Death Valley and Dunn Siding.

Greatest One-day Precipitation 6.07 inches on the 2d at Lake Arrowhead.

Greatest Total Snowfall 43.1 inches at Mount Shasta Ski Bowl.

Deepest Snow on Ground 118 inches on the 2d+ at Mount Shasta Ski Bowl.

See Reference Notes Following Station Index

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days, also seasonal precipitation, for the preceding 12 months are carried in the June issues of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table, became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Long-term means for full-time stations (those with Weather Bureau, Weather Bureau Airport, or Weather Bureau City in the station name, and also Beaumont 1 E and San Jose) are based on the period 1921 - 1950, adjusted to represent observations taken at the present location. Long-term means for all stations except full-time Weather Bureau stations are based on the period 1931 - 1955.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the "Seasonal Snowfall" Table include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in the "Monthly Extremes"; "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. (During the summer months some observers take the observations on daylight saving time.)

Snow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and FAA stations. For these stations snow on ground values are at 4:00 a.m. PST, except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB which are taken at 6:00 a.m. PST, and Mt. Shasta WB City at 8:00 a.m. PST.

In the Station Index the letters C, G, H, J, and S in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.

G "Soil Temperature" Table.

H "Snowfall and Snow on Ground" Table.

J "Supplemental Data" Table.

S Storage Precipitation Station. Precipitation measurements, made at irregular intervals, will be published later in "Storage-Gage Precipitation Data" Bulletin.

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.

Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.

\- No record in the "Supplemental Data" Table; "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; "Daily Soil Temperature" Table; and the Station Index.

\+ And also on an earlier date or dates.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

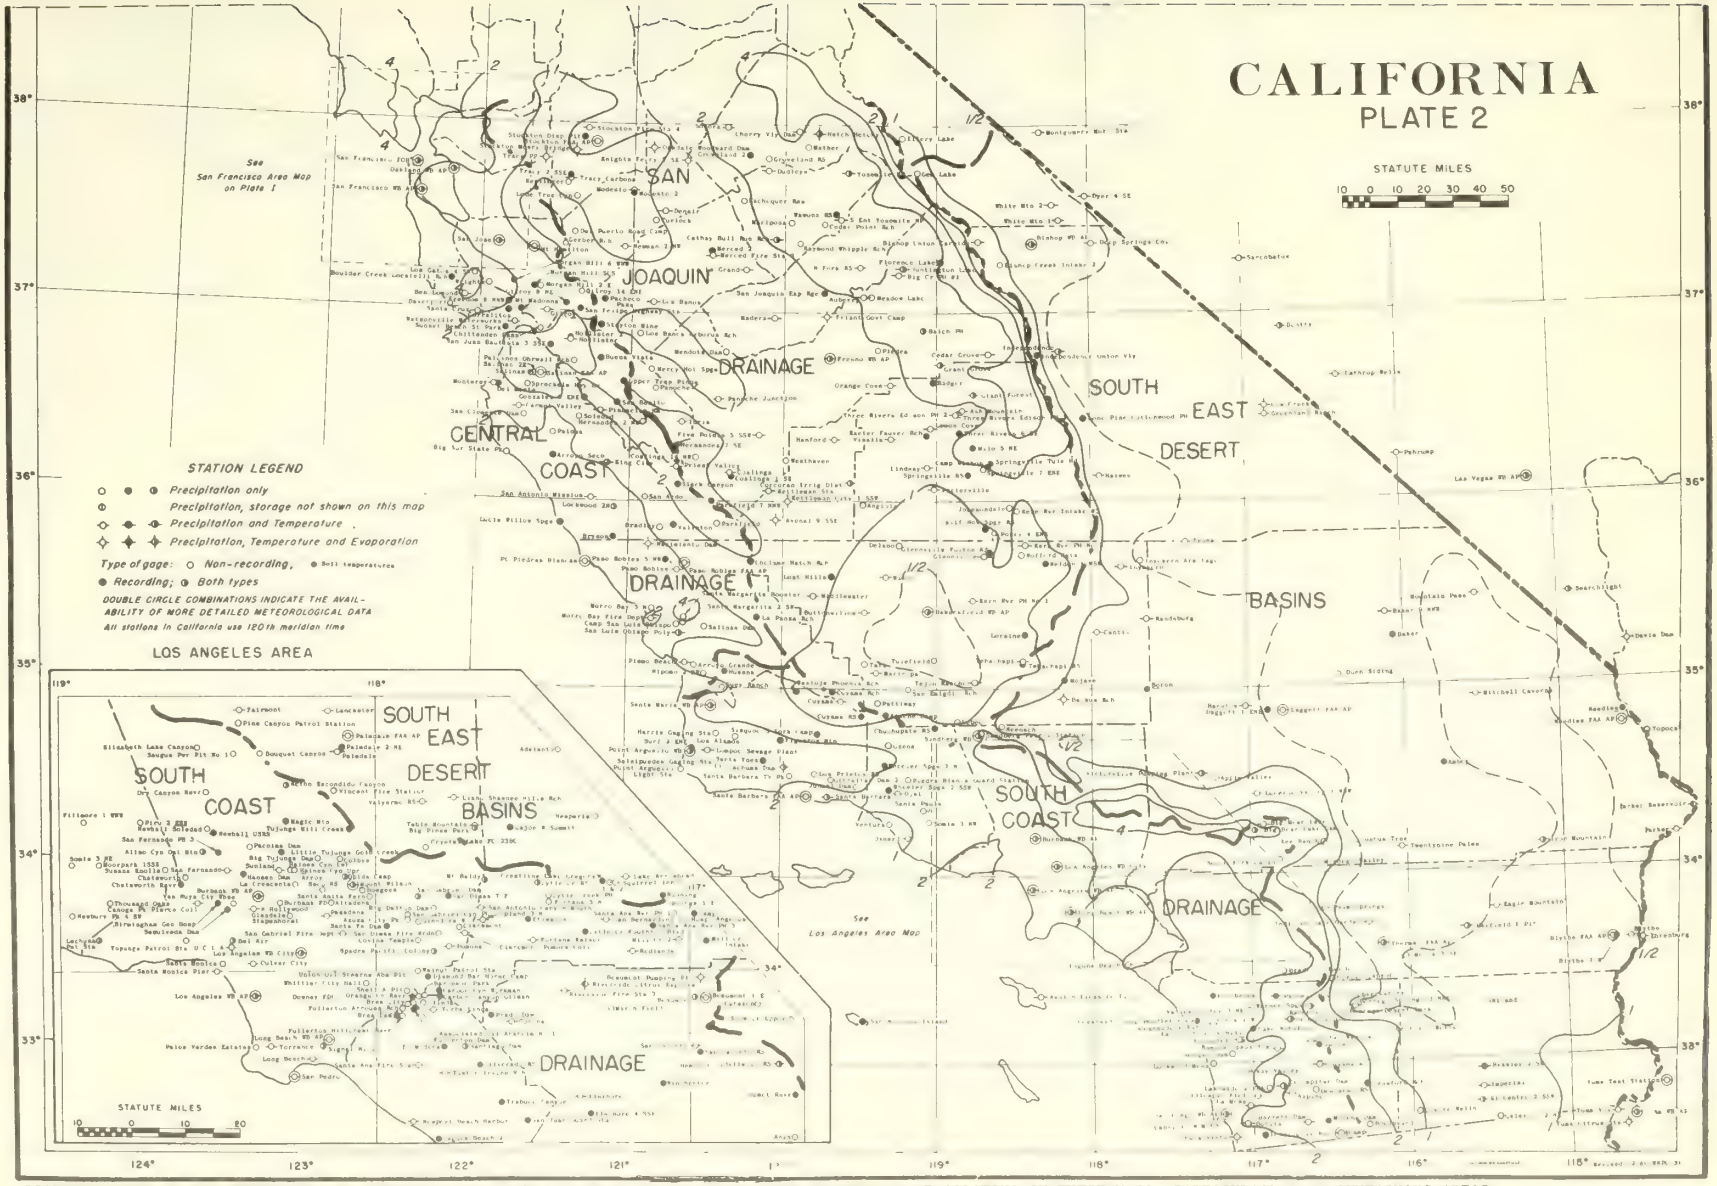
M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.



VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

General weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA - NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication SUBSTATION HISTORY for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C. for $1.25. Similar information for regular Weather Bureau stations may be found in the latest annual issues of Local Climatological Data, obtained as indicated above, price 15 cents.

CORRECTED DATA

NOVEMBER 1960	PIT RIVER PH 5	Precipitation on 6th should be .07 and monthly total 13.45.
DECEMBER 1960	DOBBINS COLGATE FOREBAY	Precipitation on 1st should be .70, monthly total 2.64 and departure -5.35.
	NACIMIENTO DAM	Precipitation on 2d should be .11; 11th, .02, and monthly total 1.54. Evaporation for 1st and 2d should be accumulated amount .03; 11th, .02; and monthly total 1.20.
FEBRUARY 1961	NACIMIENTO DAM	Precipitation on 17th should be .03 and monthly total .33. Evaporation on 17th should be .11 and monthly total 82.45.
MARCH 1961	NEWBURY PARK 4 SW	Delayed Data June 1961: Precipitation on 4th should be Trace; 15th, .49; 17th, .07; and monthly total .56.
MAY 1961	CANYON DAM	Precipitation on 11th should be .51, monthly total 2.33, departure +.61, and day with .10 or more 6,.50 or more 2.
JULY through SEPTEMBER 1961	KETTLEMAN CITY 1 3SW	Max temperature from July 7 through period indicated should have been published one day later. Observations were being set back to the previous day.
SEPTEMBER 1961	TOPANGA PATROL STA FC 6	Precipitation on 16th and monthly total should be .09.
OCTOBER 1961	YORBA LINDA	Precipitation on 11th should be .11, monthly total .11 and departure -.49.
OCTOBER and NOVEMBER 1961	RIVERSIDE CITRUS EXPERIMENT STATION	Delete soil temperature record for the 12-inch depth. Soil thermometer out of calibration.
NOVEMBER 1961	SUSANVILLE AP	Min temperature on 10th should be 28, mean min 23.0M, mean 36.6M, departure -3.3, and total degree days 852.
	VOLLMERS	Precipitation on 30th should be 2.63 and monthly total 13.44.

[1] HOLTVILLE SILTY CLAY, BARE GROUND, EXPOSED TO SUN, LEVEL SURFACE. DATA FOR THE 4- AND 8-INCH DEPTHS FROM THERMOGRAPH. MONTHLY AVERAGES AT THESE DEPTHS ARE AVERAGES OF DAILY MAXIMUM AND MINIMUM VALUES. DATA FROM OTHER DEPTHS ARE FROM MERCURY-IN-GLASS THERMOMETERS. MONTHLY AVERAGES FROM THESE DEPTHS ARE AVERAGES OF SINGLE READINGS AT TIME SHOWN.

[2] SANDY LOAM - UNDER BARE GROUND SURFACE. DATA FROM SOIL THERMOGRAPH.

[3] RAMONA SANDY LOAM. DATA FROM AIR AND SOIL THERMOGRAPH.

[4] RAMONA SANDY LOAM UNDER THE EAST SKIRT OF A VALENCIA ORANGE TREE, SHADED AND UNDER REGULARLY IRRIGATED SOIL. DATA FROM AIR AND SOIL THERMOGRAPH.

[5] MONTHLY AVERAGES AT DAVIS 1 WSW AND RIVERSIDE CITRUS EXPERIMENT STATION ARE AVERAGES OF DAILY MAXIMUM AND MINIMUM VALUES.

[6] EXTREMES ARE THE HIGHEST AND LOWEST OBSERVED AT THE TIME INDICATED OR THE HIGHEST MAXIMUM AND THE LOWEST MINIMUM AVAILABLE.

See reference notes following Station Index.

MAX AND MIN IN TABLE 4 REFER TO MEAN MAXIMUM AND MINIMUM TEMPERATURES OF WATER IN PAN.

See reference notes following Station Index

REFERENCE NOTES

Additional information regarding the climate of California may be obtained by writing to the State Climatologist at Weather Bureau Office, 557 Federal Office Building, 50 Fulton St., San Francisco 2, California, or to any Weather Bureau Office near you.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in°F., precipitation and evaporation in inches, and wind movement in miles.

Evaporation is measured in standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 4.

Long-term means for full-time stations (those with Weather Bureau, Weather Bureau Airport, or Weather Bureau City in the station name, and also Beaumont 1 E and San Jose) are based on the period 1921-1950, adjusted to represent observations taken at the present location. Long-term means for all stations except full-time Weather Bureau stations are based on the period 1931-1955.

Climatological divisions, outlined on the maps in this bulletin became effective with data for January 1941.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried in the June and December issues of Climatological Data.

- \- No record.
- \+ Also earlier date (dates) or months.
- * Amount included in following measurement.
- V Includes total for previous months. V in annual column means total is for a two-year period.
- # Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.
- // Gage is equipped with a windshield.
- B Adjusted to full month.
- C Data for recorder stations denoted by "C" in the Refer to Tables column of the Station Index are processed for special purposes and published in "Hourly Precipitation Data". Length of record for recorder-only stations may be found in the annual issue of "Hourly Precipitation Data".
- E Amount is wholly or partially estimated.
- G In the "Refer to Tables" column of the Station Index the letter "G" indicates that soil temperatures are published.
- M One or more days' record missing; if average value is entered, less that 10 days' record is missing. See monthly Climatological Data for detailed daily record.
- R Amounts from recording gage. These amounts are essentially accurate but may vary slightly from the amounts to be published later in "Hourly Precipitation Data".
- S Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published later in "Precipitation Data from Storage-Gage Stations" Bulletin.
- T Trace, an amount too small to measure.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication 'Substation History' for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C. for $1.25. Similar information for regular Weather Bureau stations may be found in the latest annual issues of Local Climatological Data, obtained as indicated above, price 25 cents.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

JANUARY 1962
Volume 66 No. 1

ASHEVILLE: 1962

Precipitation: Precipitation in January was below normal over nearly all of the State. In the North Coast, Central Coast, and Sacramento Drainages it was the driest January since 1949. However, San Diego reported the first above-normal month since November 1960. Rainfall in most areas was limited to light showers on the 12th and a brief rainy spell from the 18th through the 20th. The latter period was associated with cold weather, resulting in abnormal snow conditions in many coastal areas of the State, in the Sacremento and San Joaquin Valleys, and in the mountains of southern California. In some of these areas new snowfall records were established by the storm.

Temperature: Temperatures averaged above normal south of the Tehachapis and near or below normal to the north. New records were set for both high and low readings during the month. A 75° recorded at Oakland on the 8th, an 83° on the 7th at Santa Maria, a 71° on the 31st at Blue Canyon, and 87° on the 7th at Burbank set new records for January. New high temperature records for the dates were set at San Diego on the 28th, 29th, and 30th, at Red Bluff on the 7th and 8th, and at Sacramento on the 8th and 10th. By contrast, Fresno reported the coldest January mean temperature since 1949. Mt. Shasta recorded -2° on the 21st to set a new January low since records started in 1908, and the maximum of 10° on the 21st set a new low record for maximum temperatures at the statio The daily mean temperature of -4° on the 21 is the lowest mean temperature ever report there. Sacramento and Ref Bluff also report maximum readings very near the lowest of reco

Storms: High winds in southern Californ were responsible for three deaths and maj damage to buildings and utilities on the 10 and 11th. The cold weather, rain, and snow the 20th and 21st closed many highways a downed utility lines. Many water pipes we broken by the sub-freezing temperatures areas not prepared for them. Heavy rains southern California resulted in local floodi At the end of the month dense fog persist for 5 or 6 days in the Great Valley, resulti in numerous traffic accidents. At least 2 deaths were attributed to this fog condition and most schools were closed for the greate part of the week.

San Francisco 2, California

MONTHLY EXTREMES

Highest Temperature 95° on the 8th at Indio U S Date Garden.

Lowest Temperature -33°on the 22d at Jess Valley.

Greatest Total Precipitation 7.80 inches at Bullards Bar Power House.

Least Total Precipitation Trace at Death Valley.

Greatest One-day Precipitation 6.23 inches on the 20th at Santa Margarita Booster Station.

Greatest Total Snowfall 60.0 inches at Twin Lakes.

Deepest Snow on Ground 92 inches on the 20th at Mount Shasta Ski Bowl.

STATION LEGEND
Precipitation only
Precipitation, storage not shown on this map
Precipitation and Temperature
Precipitation, Temperature and Evaporation
Type of gage. ○ Non-recording; ● Bell temperatures
● Recording, ● Both types.
Double circle combinations: Complete Meteorological.
DOUBLE CIRCLE COMBINATIONS INDICATE THE AVAIL-ABILITY OF MORE DETAILED METEOROLOGICAL DATA
All stations in California use 120th meridian time

ISOLINES ARE DRAWN THROUGH POINTS OF APPROXIMATELY EQUAL VALUE. CAUTION SHOULD BE USED IN INTERPOLATING ON THESE MAPS, PARTICULARLY IN MOUNTAINOUS AREAS.

AVERAGE TEMPERATURE

ISOLINES ARE DRAWN THROUGH POINTS OF APPROXIMATELY EQUAL VALUE. CAUTION SHOULD BE USED IN INTERPOLATING ON THESE MAPS, PARTICULARLY IN MOUNTAINOUS AREAS.

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days, also seasonal precipitation, for the preceding 12 months are carried in the June issues of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table, became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Normals for all stations are climatological standard normals based on the period 1931 - 1960.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the "Seasonal Snowfall" Table include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in the "Monthly Extremes"; "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. (During the summer months some observers take the observations on daylight saving time.)

Snow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and FAA stations. For these stations snow on ground values are at 4:00 a.m. PST, except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB which are taken at 6:00 a.m. PST, and Mt. Shasta WB City at 8:00 a.m. PST.

In the Station Index the letters C, G, H, J, and S in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.

G "Soil Temperature" Table.

H "Snowfall and Snow on Ground" Table.

J "Supplemental Data" Table.

S Storage Precipitation Station. Precipitation measurements, made at irregular intervals, will be published later in "Storage-Gage Precipitation Data" Bulletin.

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.

Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.

\- No record in the "Supplemental Data" Table; "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; "Daily Soil Temperature" Table; and the Station Index.

\+ And also on an earlier date or dates.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

General weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA - NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication SUBSTATION HISTORY for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C. for $1.25. Similar information for regular Weather Bureau stations may be found in the latest annual issues of Local Climatological Data, obtained as indicated above, price 15 cents.

CLIMATOLOGICAL DATA

CALIFORNIA

FEBRUARY 1962
Volume 66 No. 2

ASHEVILLE: 1962

Temperature: Temperatures averaged colder than normal at nearly all points in the State, with the exception of a few areas in the Southeast Desert Basins, where above normal readings were reported. Negative departures ranged from less than 1° along the Central Coast to more than 2° in the Northeast Interior Basins.

New temperature records were set in the northern half of the State. Sacramento, for example, reported a minimum on the 8th of 52°, the highest ever recorded on that date. On the other hand, the maximum on the 26th was the lowest ever recorded on that date, and the minimum on the 26th was the lowest on that date since 1911 and that of the 27th was the lowest on that date since 1890. At Red Bluff the minimum on the 27th set a new low record for the date. Mount Shasta and Eureka both reported on the 27th the lowest minimum ever observed so late in the season.

Precipitation: After a period of 2 or 3 months with below normal precipitation February produced above normal moisture in all parts of the State. Excesses ranged from a little over 1 inch in the Southeast Desert Basins to around 6.5 inches in the Sacramento Drainage.

Mount Shasta reported the fourth wettest February of record. Sacramento had the sixth wettest February, and reported 11 days with precipitation, a record exceeded only once in the records. New 24-hour rainfall records were set for the 9th and the 14th. Blue Canyon had the wettest February since records began in 1921. At Fresno the total was the greatest recorded in any February and the third greatest observed in any month, while Bakersfield and Santa Maria reporti the wettest February in their records.

Burbank had the second wettest Februa and Los Angeles City Office the third we test February of record, while the Los A geles Airport received the greatest preci itation ever recorded in any month. Bo Burbank and Los Angeles Airport set new 2 hour rainfall records for February and Bu bank reported sleet for the first time their history. In San Diego the season total through February was the greate since the winter of 1951-1952. Sunshine San Diego was 20 percent less than the ave age for February.

Storms: The heavy precipitation continu intermittently from the 7th through the 26 resulting in local flooding, particular in the vicinity of built-up areas whe drainage facilities were inadequate. Home roadways, and utility lines suffered fr the flooding, from mudslides, and from fal ing trees. A freighter was lost when ran aground, and a number of smaller boa were beached by the winds. Traffic acc dents were too numerous to tabulate.

Wind damage was reported on the 10th Hanford and on the 11th at Fontana. Funn clouds were observed on the 16th at Pino and in the Los Angeles area. Storms class ified as tornadoes were reported on t 19th at Northridge and at Santa Ana.

C. Robert Elford
Weather Bureau State Climatologis
557 Federal Office Building
50 Fulton Street
San Francisco 2, California

MONTHLY EXTREMES

Highest Temperature 86° on the 2d at Sunland and on the 5th+ at Indio US Date Garden.

Lowest Temperature -37° on the 27th at Boca.

Greatest Total Precipitation 32.44 inches at Strawberry Valley.

Least Total Precipitation 0.05 inch at Iron Mountain.

Greatest One-day Precipitation 8.73 inches on the 11th at Hoegees FC 60 A.

Greatest Total Snowfall 230.5 inches at Twin Lakes.

Deepest Snow on Ground 133 inches on the 16th at Twin Lakes.

See reference notes following Station Index.

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days, also seasonal total precipitation for the 12 months ending with the June data will be carried in the July issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table, became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Normals for all stations are climatological standard normals based on the period 1931 - 1960.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the "Seasonal Snowfall" Table include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in the "Monthly Extremes"; "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. (During the summer months some observers take the observations on daylight saving time.)

Snow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and FAA stations. For these stations snow on ground values are at 4:00 a.m. PST, except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB which are taken at 6:00 a.m. PST, and Mt. Shasta WB City at 8:00 a.m. PST.

In the Station Index the letters C, G, H, J, and S in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.

G "Soil Temperature" Table.

H "Snowfall and Snow on Ground" Table.

J "Supplemental Data" Table.

S Storage Precipitation Station. Precipitation measurements, made at irregular intervals, will be published later in "Storage-Gage Precipitation Data" Bulletin.

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.

Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.

\- No record in the "Supplemental Data" Table; "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; "Daily Soil Temperature" Table; and the Station Index.

\+ And also on an earlier date or dates.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

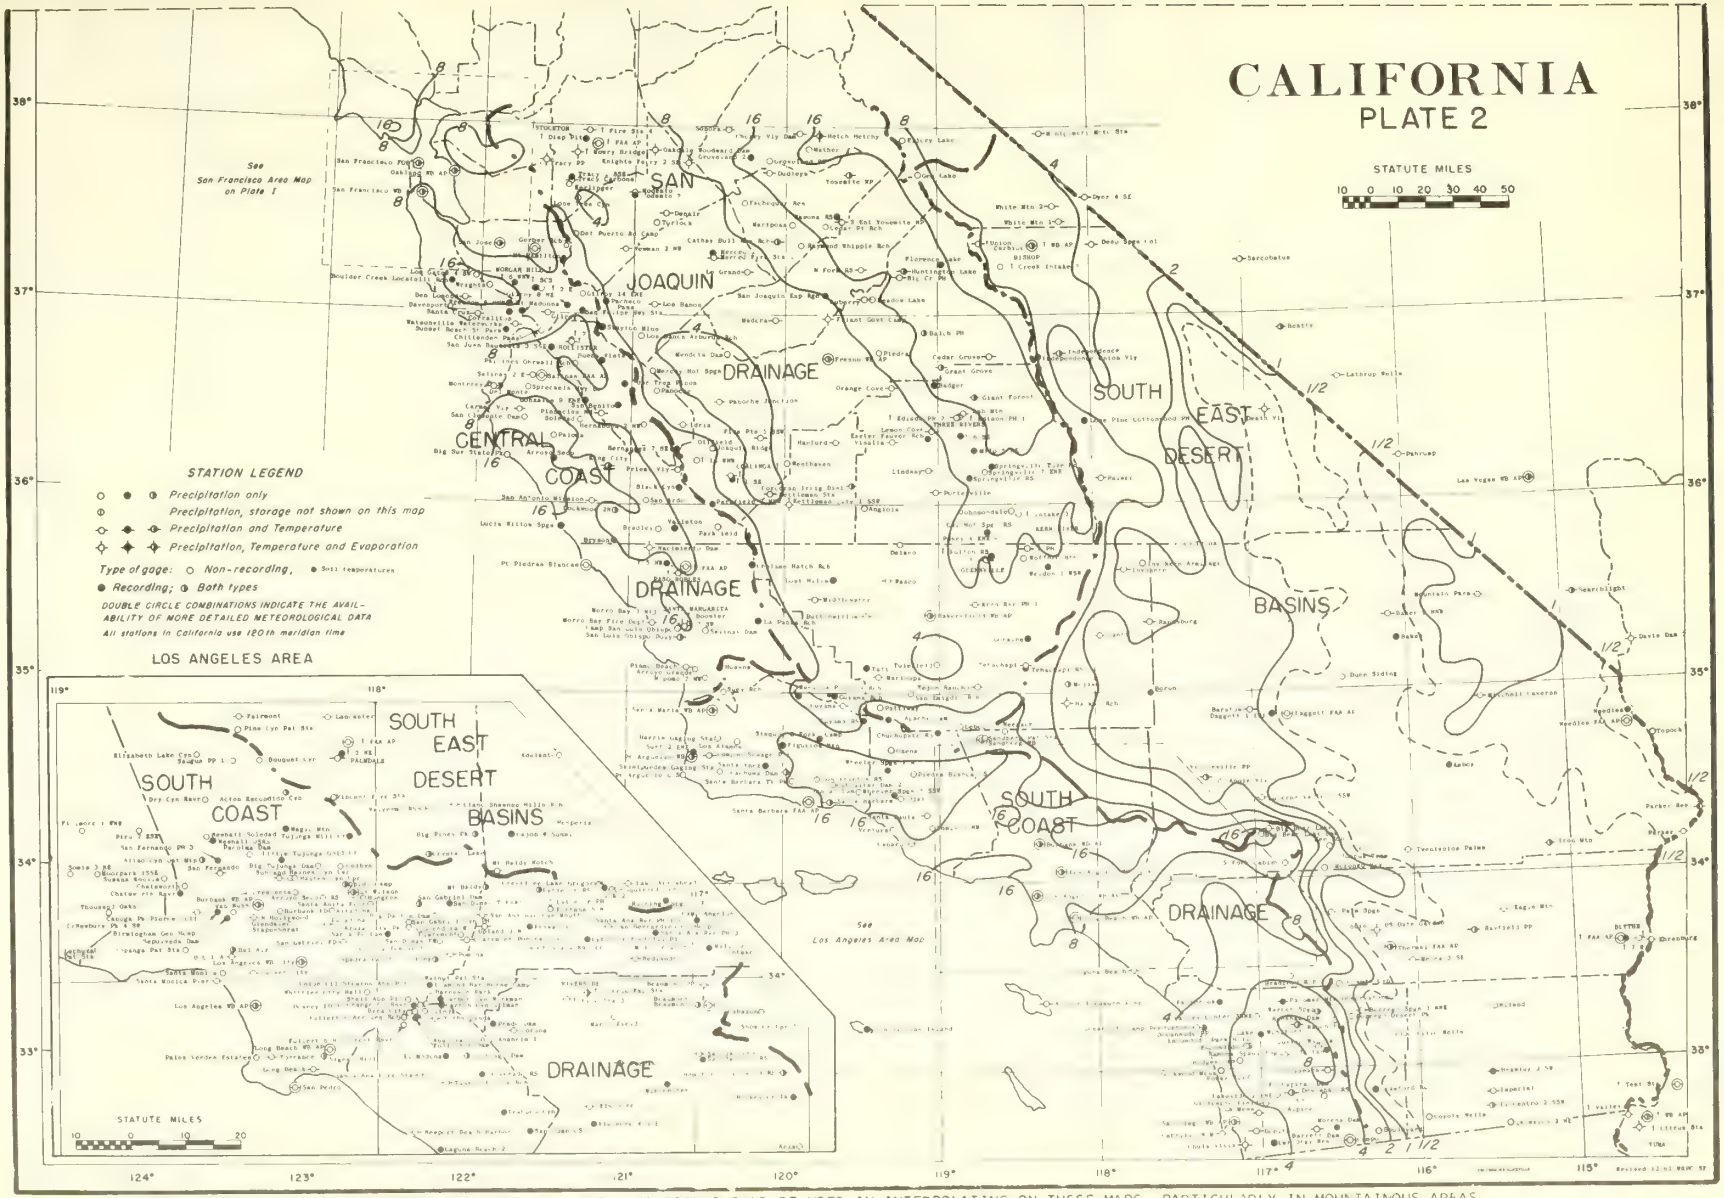
M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.



VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

General weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA - NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication SUBSTATION HISTORY for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C. for $1.25. Similar information for regular Weather Bureau stations may be found in the latest annual issues of Local Climatological Data, obtained as indicated above, price 15 cents.

CLIMATOLOGICAL DATA

CALIFORNIA

MARCH 1962
Volume 66 No. 3

CLEMSON COLLEGE LIBRARY
MAY 18 1962
AGRI. REF. DEPT.

ASHEVILLE: 1962

Precipitation: The above normal precipitation pattern was continued in March in much of the northern one-quarter of the State, with the greatest positive departure in the northeast interior, where monthly totals averaged nearly 150 percent of normal. In the central and southern part of the State, however, March precipitation was below normal with the deficiency becoming greater to the southwest. Totals south of the Tehachapis were generally around 55 percent to 60 percent of normal for the month.

Snowpack in the Sacramento Drainage at the end of the month was estimated at 125 percent to 130 percent of normal, while in the San Joaquin Drainage it was around 140 percent of normal for this time of year.

Temperature: Temperatures averaged well below normal at every station in the State for which normals have been established. Deficiencies averaged around 3° for the month on the north and central coast increasing to near 5° in the northeast interior and south of the Tehachapis. In some cases departures for the month were as great as 9°.

At Red Bluff there was only one day with above normal temperature in the period February 16 through March 25. Santa Maria experienced the coldest March in Weather Bureau records; in the records of the cooperative station going back to 1900, March of 1919 was the only one that has been colder. During the month only one day was reporte with above normal temperature.

San Diego had the coldest March sinc 1939, and Los Angeles Airport had the coldest of record and the coldest March sinc 1945. At Burbank it was the coldest Marc since 1952, and a reading of 35° on the 1s was the lowest March temperature recorde since 1951.

Storms: General storms from the through the 6th resulted in considerable da age over the State, as wind damaged tre and utility lines, snow blocked highwa and railroads, and mud inundated yards a streets below canyons that received hea rain. Two persons were killed and one w injured as a result of the storms. At S Diego witnesses reported seeing two funn clouds over the ocean about 15 miles south west of the city. One and possibly two fu nel clouds were reported in the vicinity Fresno on the 22d; one of them damaged farm building. In the vicinity of Sacrame to hail was reported on the 6th, 15th, a 22d.

Weather Bureau State Climatologis
557 Federal Office Building
50 Fulton Street
San Francisco 2, California

MONTHLY EXTREMES

Highest Temperature 93° on the 26th at Blythe and on the 27th at Death Valley and Indio Date Garden.

Lowest Temperature -14° on the 13th at Bridgeport.

Greatest Total Precipitation 14.62 inches at Gasquet Ranger Station.

Least Total Precipitation 0.00 at Niland.

Greatest One-day Precipitation 4.54 inches on the 6th at Vollmers.

Greatest Total Snowfall 157.5 inches at Twin Lakes.

Deepest Snow on Ground 220 inches on the 6th at Mount Shasta Ski Bowl.
